System Integrator:
Intek

A Fortune 100 Telecommunications Giant

HYDERABAD, INDIA

A telecommunications giant with 150 corporate office locations around the world deployed IXM TITAN for touchless access control. The Hyderabad, India location is part of the company's technology hub in APAC with nearly 4,500 employees working out of the office park in various engineering-related roles. The size of this workforce posed a great challenge requiring all staff to be on-site to uphold its productivity and customer support standards.

IXM TITAN Deployed by the Company to Keep a Large Workforce Productive with Access Control

A total of 4,500 individuals congregating in one office building posed a significant challenge for balancing productivity benchmarks with employee health and safety. To improve efficiency without compromising staff well-being, the company met with the local system integrator, Intek, to find a fast-throughput, high-accuracy solution for providing staff with a touchless method of access control on a daily basis. Previously, this telecommunications giant had used cards for access control, and they were interested in upgrading to a higher-security, health-conscious access control system.

Invixium Provides a Unique Solution to Replace Cards with Touchless Access

Intek proposed IXM TITAN because the Invixium solution is known for its fast-throughput capabilities and rugged construction that perfectly match the needs of a large workforce. The numerous benefits of installing IXM TITAN include fast throughput (20-25 people per minute) to limit lobby congestion and touchless face recognition, so staff do not have to handle shared surfaces to come to work. With 25 devices installed, the company has begun its transition from simple card access to modern, future-proofed touchless access control. Following the success of this first installation, the corporation ordered 10 more devices for expansion to their Hyderabad, Chennai, and Bangalore offices. They also plan to install 40 additional devices at employee access doors.

PROBLEM

With a large workforce, many traditional access control solutions create bottlenecks when waves of staff come to work for the day. To eliminate bottlenecks and upgrade from their now-antiquated card-based system, the corporation needed a solution with unmatched speed and durability. Hands-free entry with fast face recognition became a necessity to keep staff in the office safe, secure, and productive.

SOLUTION

IXM TITAN is Invixium's signature solution for enterprise access control. As a multi-factor reader with high throughput, IXM TITAN helps staff transition from cards to face recognition by accepting all card types. Modern features like touchless access and robust face recognition capabilities ensure that staff can access the office seamlessly and confidently, prioritizing individual security and convenience.

BENEFITS

- Touchless access like face recognition along with mask detection (enable on/off) provides staff and management with the highest level of confidence. Management can decide to turn on mask detection when needed.
- IXM TITAN's multi-factor capabilities via face recognition and card reading enable a smooth transition from cards to touchless biometrics, offering high flexibility for the staff members using these devices for office access.
- Biometrics are a highly secure method of protecting enterprises because they cannot be lost, traded, or shared among enrolled users, nor can they be stolen or copied by nefarious individuals in the same way that cards can.

YOUR TRUSTED PARTNER IN BIOMETRICS

Headquartered in Toronto, Canada, with presence in India, Middle East, UK, USA, Latin America, and Africa, Invixium designs and manufactures rugged biometric solutions that leverage the latest technologies to provide businesses with a unified end-to-end solution for access control, workforce management, and visitor management. Their fully integrated hardware, software, and mobile platform solution helps improve the health, safety, productivity, and security of enterprises and industries using accurate data capture and intelligent data analytics.

With sales exceeding tens of thousands of products in over 60 countries and deployments at major enterprises and industries across a broad spectrum of verticals, Invixium strives to provide industry-leading biometric solutions that are not only visually stunning, but also intuitive for ease of use and install. Invixium products are proudly Made in Canada.
