

IDCUBE's QRify on Invoxium Face Readers

IDCUBE's **QRify** dynamic QR code offers an innovative approach to mobile credentialing, delivering secure and seamless access control. Now integrated with **Invoxium's face recognition readers**, QRify provides a cost-effective, convenient mobile access solution that supports sustainability. By regenerating QR code every five seconds and employing robust encryption, QRify mitigates the risk of credential duplication or unauthorized sharing.

Benefits

Multifactor Authentication: QRify enhances the multi-factor authentication capability of IXM Devices by mapping IDCUBE's QRify with face, finger, PIN & card authentication modes.

Cost-Effective: QRify is more affordable than BLE or card-based credentials. Once deployed on IXM readers, it eliminates the need for additional QR code readers, resulting in substantial cost savings.

Eco-Friendly: QRify combined with IXM Biometrics completely eliminates PVC Access cards, significantly reducing carbon foot print.

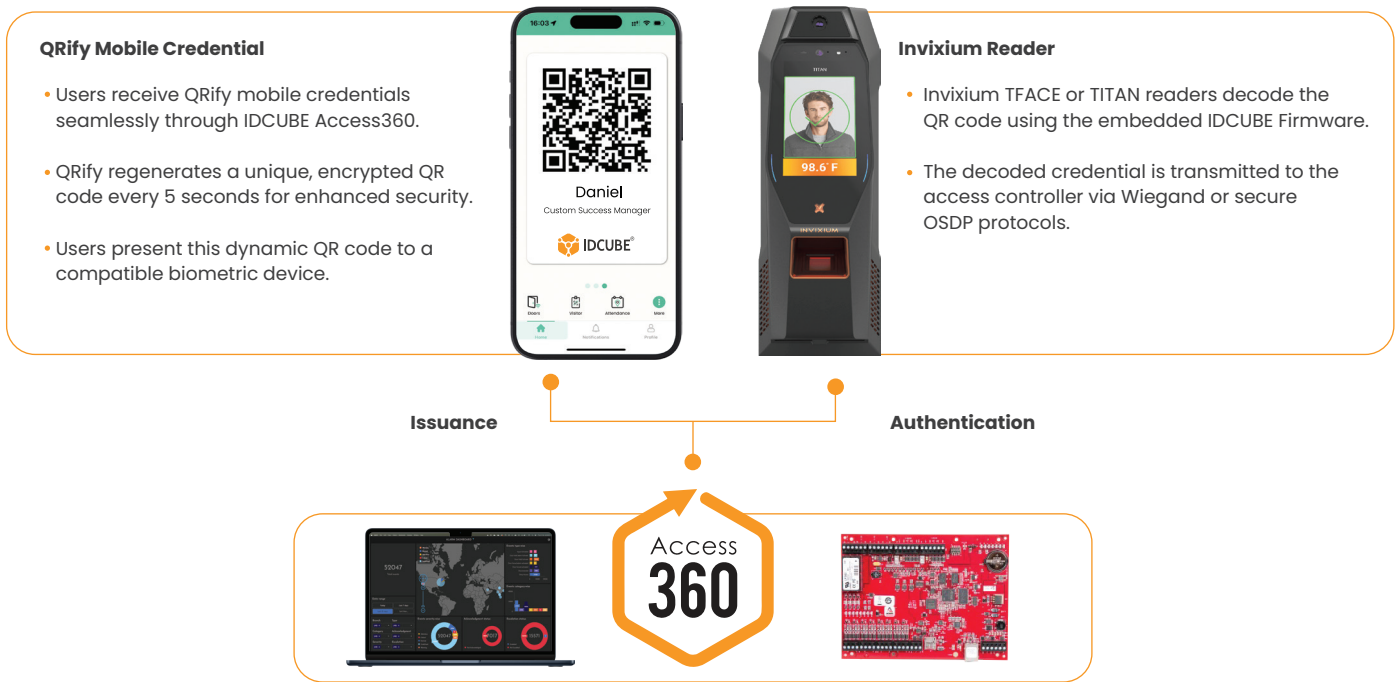

Enhanced Security: QRify elevates security by leveraging IDCUBE's Firmware to enable IXM readers to decode dynamic, time-sensitive QR codes that cannot be replicated or shared.

Authentication: Access to All: QRify allows access for both employees and visitors by enabling IXM readers to read both dynamic QRCode and Classic QRCode.

How It Works

Why Choose QRify?

Secure: Dynamic QR codes ensure that credentials cannot be copied or shared.

Convenient: Credentials are deployed directly to users mobile devices within seconds, enhancing user experience.

Cost-Effective: QRify drastically reduces the cost of physical credential production.

Eco-Friendly: Eliminating plastic credentials helps reduce waste and supports sustainability efforts.
